Subject: I need another exposure calculation

A number of people are criticizing us for using the exposure construction for those who were working before 1972 as there were no IH measurements then.

As part of a sensitivity analysis, it would be helpful to have the exposure reconstruction redone without the factor of 2 that you built

into the JEM. Please redo the analysis (both to 6/1980) and to job stop, taking into account the correction for ore source but without the factor of 2.
